

Purpose:

Bucknell University is proud to operate a full-scale vehicle testbed and recognizes the challenges associated with vehicle experimentation. As a result, Bucknell invites researchers to propose research experiments that could be completed with P1 at Penn State LTI. If feasible, Bucknell and Penn State will invite researchers to join the research teams to complete the proposed experiments. Since part of the sensor suite is provided through NSF grant funding, researchers using the equipment are asked to report research products to Bucknell University and cite the grant in any publications.

Basic Information:

Affiliation:

Name(s) of researcher(s):

Proposed dates of experimentation:

Best contact information for arrangements and follow-up:

Experiment Information:

Briefly describe the purpose and anticipated outcome(s) of the experiment:

Briefly describe the instrumentation needed/data expected from the experiment:

Briefly describe the intended usage of the data after completion of the experiment (publication in conference/journal publications, modifications to other test vehicles, etc.)
